

FOIN® COTTE DE MAILLES

CHEQUERED LAMEX+

registered design

Sheet consisting of aluminium square-proportioned plates joined at the angles via stainless steel welded rings.

Built with half the number of plates as for the Lamex+ model, this "weave" is astonishingly flowing and light. As an articulated textile, it catches the light and vibrates as soon as any contact with it is made, like a wave. It calls out to be touched as demonstrated by its joyous sounds. Extremely deformable, it captures the light as it filters the light according to the hanging mode selected. It can be highlighted by just the right lighting.

The combination of aluminium and 316L stainless steel leads to a lightweight product endowed with excellent tensile strength and resistance to deformation, corrosion, fire, along with an outstanding life cycle.

The chequered Lamex+ model comes in a unique format. The sheets are finished by a continuous band of plates at the border.

Material (plates/rings)	aluminium/SS 316L
Single size630 x 2500 mm
Weight	1,15 kg/m ²
Fire classification	M0
Sheet thickness	4 mm
Plate size (l x w)	19 x 20 mm
Item number	10426/137/C01

For other tones, see the "Lamex+ Color"
Scale of drawing : 1/1
