FOIN® COTTE DE MAILLES

LAMEX+ COLOR

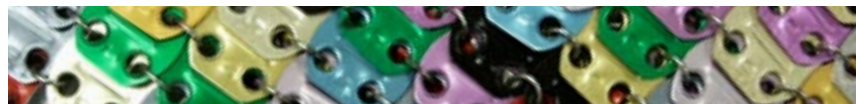

FOIN® COTTE DE MAILLES

Sheet made up of aluminium square-proportioned plates, assembled in layers and joined by stainless steel rings. Originally an industrial product, the Lamex models were initially designed as protection against sharp blades.

A choice of eleven colors, obtained by anodizing the plates. Sheets can be plain or multi-colored, the color and size of the plates are selected and the mix is random. As the join between two parts of Lamex+ is invisible, sections of different colors can be place side by side.

Please contact us to check the feasibility of assembly.

The combination of aluminium and 316L stainless steel leads to a lightweight product endowed with excellent tensile strength and resistance to deformation, corrosion, fire, along with an outstanding life cycle.

The parts are made to your dimensions, with the seams ensured using the same rings, for a homogeneous sheet.

Material (plates/rings)	aluminium/SS 316L
Max. size without connection (l x w)	2500 x 800 mm
Weight	3,29 kg/m ²
Fire classification	M0
Sheet thickness	4 mm
Plate size (l x w)	19 x 20 mm
