FOIN® COTTE DE MAILLES

Sheet consisting of aluminium square-proportioned plates assembled in layers and joined by stainless steel welded rings, with each square placed regularly, in open-work. It comes in a colour* range that enables the sheets to be made either plain or mixed.

As in the case of all Lamex sheets, their “woven effect” combines flexibility and rigidity while catching the light remarkably well. Its open-work gives it an original look while creating articulated folds at the different facets.

Its use in moucharaby is particularly interesting at the architectural level. The combination of aluminium and 316L stainless steel has led to a lightweight product endowed with excellent tensile strength and resistance to deformation, corrosion, fire, along with an outstanding life cycle.

The parts are made to your dimensions, with the seams ensured using the same rings, for a homogeneous sheet.

Material (plates/rings)	Aluminium/SS 316L
Max. size without connection (l x w)	2500 x 800 mm
Weight	2,5 Kg/m ²
Fire classification	M0
Sheet thickness	4 mm
Plate size (l x w)	35 x 19 mm

**For other tones, see the “Lamex+ Color”
Scale of drawing : 1/10*
