

# FOIN® COTTE DE MAILLES

FIREPLACE SCREEN Chainex 07 chainmail

registered design

The **FOIN®** COTTE DE MAILLES fireplace screen, equipped with rings, is mounted on a plain rod. The particular flexibility, transparency and density of the chainmail make it possible to enjoy the fire while offering protection against sparks, including when handling logs (You need only to open it or lift it slightly). The air needed to ensure proper operation of the fireplace circulates perfectly well.

According to the width of the fireplace to be fitted, choose one or several panels. It is advised to leave a bit for gathering. The opening can be placed at the centre or at one of the sides. Amongst the different heights offered, choose the one that enables the chainmail to “break” onto the sole plate of the fireplace, for a harmonious drop.

The chainmail is made of totally non-flammable stainless steel.

Material ..... inox / rings plated steel fasteners  
 Diamètre max. de la barre ..... 1,2 cm  
 Weight ..... 2,2 kg/m<sup>2</sup>  
 Fire classification ..... M0  
 Size\*\* (h x w) and item number .....

*\*Total height including rings, 1% tolerance. It is highly recommended to plan on having a break of several centimetres on the floor. For other dimensions for finishes, contact us.*

*\*\*The standard widths can be related to the application (on request).*
